The course was very good. However struggled a little bit with the level of attendees, as some already seemed very proficient of java.

Very in depth. Covered a lot of ground, which was sometimes a bit of a struggle for someone at the bottom end of the learning curve, as myself. Overall, learnt a lot.

It's an excellent overview, <sup>very practical.</sup> It was good to code the exercises and find the bugs and fix them.  
In terms of improving the course, it would be good to look back at the ~~end~~ e-commerce application ~~at the end~~ towards the end of the course, the last day perhaps ~~and~~ after Maven & Design Patterns and look at how the application would have been designed from scratch. for e.g. using a particular design pattern etc.

Perhaps an icebreaker to get everyone to know each other at first (although I may have missed it due to late draws a day 1)

Good pace - although sometimes I was slow to find the ~~right~~ correct buttons/drop downs in Eclipse = perhaps expand the course notes to support?

Good pace, covered everything required.  
Explanations were good, as was assistance with debugg.ing/eclipse/apps.

Add any comments:

Simon has great knowledge on Java.  
I believe content is very in depth and  
a sound knowledge is required on general  
programming before attending the course.

Add any comments:

Very very good for the starters.  
But when you have little java experience, the first and second day are like too much time for the basics, considering only three more days to cover the rest of the course, which are little more complex. Very enjoyable & happy.
